PROFESSIONAL SUMMARY

Java Full Stack Developer with nearly three years of experience designing and delivering scalable backend services, responsive frontends, and enterprise applications. Core expertise includes **Java, Spring Boot, Spring MVC, Spring Security, Hibernate/JPA, REST APIs, microservices**, and SQL, along with Angular, React.js, and cloud-native deployment on AWS and Azure. Skilled in building containerized applications with Docker and Kubernetes, implementing CI/CD pipelines, and collaborating with cross-functional Agile teams to deliver high-quality software.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, SQL, Python

Backend Development: Java, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, Maven, Gradle

Frontend Development: Angular, React.js, Redux, TypeScript, HTML5, CSS3, Bootstrap

Cloud Platforms: AWS, Azure, Azure Functions, Azure Blob Storage, AKS, EKS

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, DynamoDB, Oracle

DevOps & Containers: Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD

Messaging & Streaming: Apache Kafka, RabbitMQ

Version Control: Git, GitHub, GitLab, Bitbucket

Testing: JUnit, Mockito, Selenium, Postman, API Testing

Methodologies: Agile, Scrum, CI/CD, DevOps, SDLC

PROFESSIONAL EXPERIENCE

Cisco Systems, USA | Java Full Stack Developer

Jan 2026 – Present

- Designed and developed scalable backend services using **Java, Spring Boot, Spring MVC, Hibernate/JPA, and Microservices** architecture, supporting enterprise network management applications handling 10K+ API requests per day.
- Developed responsive web applications using **Angular, TypeScript, HTML5, CSS3, and Angular Material**, enhancing network monitoring dashboards and improving operational visibility for multiple internal engineering teams.
- Designed and optimized RESTful APIs integrating frontend applications, databases, and external network management systems, improving API response time by 20% through query tuning and backend optimization.
- Implemented automation capabilities using **Java services, Spring Boot scheduled jobs, and intelligent classification workflows** to automate incident categorization and reduce manual troubleshooting efforts by approximately 15%.
- Built data processing workflows using **Java, Spring Batch, and SQL**, processing millions of operational data records to support analytics, reporting, and intelligent decision-making.
- Developed containerized applications using **Docker and Kubernetes** and deployed solutions across AWS cloud environments, improving application scalability and reducing deployment-related issues by approximately 25%.
- Automated CI/CD workflows using **GitHub Actions, Jenkins, and JUnit testing frameworks**, reducing manual deployment activities by 30% and improving release efficiency across development environments.
- Performed code reviews, debugging, and performance optimization activities, improving application stability and reducing recurring production issues by approximately 15%.

Hexaware Technologies, India | Java Full Stack Developer

Jun 2022 – Aug 2024

- Developed enterprise applications using **Java, Spring Boot, Spring MVC, Hibernate, React.js, JavaScript, and TypeScript**, delivering scalable solutions supporting 5K+ business transactions daily.
- Designed and implemented REST APIs and microservices for customer management, workflow automation, and third-party integrations, improving application scalability and reducing processing time by approximately 20%.
- Built reusable frontend components using **React.js, Redux, HTML5, CSS3, and Bootstrap**, improving application performance and reducing page load times by nearly 18%.
- Implemented secure authentication and authorization using **Spring Security, JWT, and role-based access control** to protect enterprise application endpoints and user data.
- Optimized persistence and data access layers using **Spring Data JPA, Hibernate, and SQL**, improving query performance and reducing database load for high-traffic modules.

- Created Docker-based development environments and deployed applications using **Kubernetes on Azure**, reducing environment setup time by approximately 25%.
- Developed data transformation pipelines using **Java, Spring Batch, SQL, and cloud services**, processing large datasets and improving data preparation efficiency for analytics workloads.
- Implemented automated testing using **JUnit, Mockito, and API testing frameworks**, increasing test coverage and reducing production defects by approximately 20%.
- Collaborated with Agile teams to deliver sprint-based enhancements, contributing to the successful delivery of multiple enterprise application releases within planned timelines.

ACADEMIC PROJECTS

Enterprise Customer Support Portal

Description: Developed a full-stack customer support application using Java and modern web technologies to automate ticket handling, route requests, and provide intelligent responses through a conversational interface.

Technologies: Java, Spring Boot, Spring Security, React.js, PostgreSQL, REST APIs, Docker, Kafka

- Developed backend services using Java and Spring Boot to process customer requests, manage tickets, and expose secure REST APIs.
- Built responsive user interfaces using React.js, JavaScript, HTML5, and CSS3 for chatbot interaction and support dashboards.
- Implemented Spring Security with JWT-based authentication and role-based access for agents and administrators.
- Integrated messaging with Apache Kafka for asynchronous ticket events and notification workflows.
- Containerized the application using Docker and deployed services in a cloud-based environment.

AgroNity – Full-Stack Agriculture Marketplace Platform

Description: Built and deployed a production Spring Boot web app that combines an online crop marketplace with recommendation services, giving farmers, customers, and admins one platform to buy, sell, and make data-backed crop decisions.

Technologies: Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, HTML5, CSS3, Bootstrap 5, Leaflet.js, Docker

- Designed and built the backend in Spring Boot, including custom user models, role-based auth (Farmer/Customer/Admin), and an admin approval workflow.
- Built the marketplace end to end (crop listing, editing, cart, and checkout) with ownership checks so users can only edit their own listings.
- Implemented recommendation APIs using Spring Boot services and SQL-backed feature data for live crop suggestions.
- Added a Leaflet/OpenStreetMap integration so farmers can locate nearby fertilizer shops and soil-testing centers.
- Handled deployment myself: containerized services with Docker, migrated to PostgreSQL for production, and configured static asset delivery.

EDUCATION

Master of Science (M.S.) in Computer Science | May 2026 | University of Maryland, Baltimore County (UMBC) | USA

CERTIFICATIONS

• Azure AI Engineer Associate (Microsoft) • Google Cloud Associate Cloud Engineer • Data Visualization (TATA Group) • Cloud Computing (NPTEL)
