PROFESSIONAL SUMMARY

Application Support Engineer with 3+ years of experience supporting enterprise applications, **Windows/Linux** servers, **AWS** workloads, and production environments. Skilled in **alert triage, incident management, root cause analysis, SQL** troubleshooting, and application monitoring with **Splunk, Datadog, and Azure Monitor**. Supports **SLA** adherence, production releases, and **ITIL** service management through **ServiceNow**, with **Python, PowerShell, and Bash** automation for operational tasks.

TECHNICAL SKILLS

Application Support: Production Support, Troubleshooting, Incident Management, Root Cause Analysis, Alert Triage, Application Health Checks, SLA Management, On-Call Support

Monitoring and Observability: Splunk, Datadog, Azure Monitor, Application Log Analysis, Server Monitoring, CPU/Memory and Disk Monitoring

Scripting and Databases: Python, Bash, PowerShell, SQL Server, Oracle SQL, SQL Queries, Database Connectivity, Transaction Troubleshooting

Operating Systems and Cloud: Unix/Linux, Windows Server, AWS, Network Troubleshooting, Backup/Recovery, File Transfers, Batch Job Monitoring

ITSM and Release Support: ServiceNow, ITIL, Incident/Problem/Change Management, Service Requests, Knowledge Documentation, Git, Jenkins, CI/CD, Smoke Testing, Post-Release Validation, Rollback Procedures

AI-Assisted Support: Microsoft Copilot, ServiceNow AI

Project Technologies: Google Cloud Run, Pub/Sub, Cloud SQL, OpenTelemetry, Grafana, Node.js, MongoDB, Docker, GitLab CI/CD, Ansible

PROFESSIONAL EXPERIENCE

Citi Bank, USA | Application Support Engineer

Jan 2026 – Present

- Monitored 15+ enterprise applications with **Splunk, Datadog, and Azure Monitor**, triaging alerts and checking application health to support incident resolution within **SLA**.
- Investigated production incidents through application logs, metrics, API responses, and database activity, documenting diagnostic findings and escalating complex issues to senior support teams.
- Troubleshot transaction failures, **database connectivity**, blocking, and timeout errors using **SQL Server** and **Oracle SQL**, following established procedures to restore application operations.
- Validated production releases using **Git, Jenkins, and CI/CD** through deployment checks, **smoke testing**, and **post-release validation**, following documented **rollback procedures** as needed.
- Created **Python** and **PowerShell** scripts for log collection, **application health checks**, and repetitive support tasks to improve routine support efficiency.
- Maintained incident, service request, problem, and change records in **ServiceNow** under **ITIL** processes, documenting troubleshooting steps and resolutions for team knowledge sharing.
- Applied **Microsoft Copilot** and **ServiceNow AI** to incident summaries, knowledge searches, and initial troubleshooting, validating recommendations against application logs and support documentation.
- Tracked application alerts, availability, and **SLA** trends during **on-call support**, documenting recurring issues and escalating findings to the appropriate support teams.

HCL Tech, India | Systems Support Engineer

Jun 2022 – Aug 2024

- Troubleshot application errors, **CPU/memory** usage, disk utilization, and connectivity across **Windows/Linux** servers and **AWS** workloads to support production operations.
- Analyzed **Windows Event Viewer, Linux** logs, and application logs to identify server and application health issues and support their resolution.
- Resolved data and application issues using **SQL Server** and **Oracle SQL**, investigating failed queries, **database connectivity** errors, and transaction-processing problems.
- Automated service checks, log collection, file validation, and disk monitoring with **PowerShell** and **Bash** to reduce repetitive manual tasks.
- Monitored **Windows Task Scheduler** and **Unix/Linux** batch jobs to detect failed or delayed executions and support timely issue resolution.
- Managed incidents, **service requests**, and changes in **ServiceNow**, applying **ITIL** processes for prioritization, escalation, resolution, and documentation.
- Validated **Windows/Linux** server patching, application maintenance, and deployments through pre-change checks and post-maintenance validation.
- Coordinated with infrastructure and application teams on backup/recovery, **AWS** connectivity, **network troubleshooting**, and file-transfer issues to support resolution.

ACADEMIC PROJECTS

Cloud Application Monitoring & Support Platform

- Built a monitoring and support platform using **Google Cloud Run**, **Pub/Sub**, and **Cloud SQL** to process application events and track application health and service performance.
- Implemented centralized monitoring and alerting with **OpenTelemetry** and **Grafana** to identify application errors and latency, improving issue detection and troubleshooting during testing.

IT Operations Automation Platform

- Developed a **Node.js** and **MongoDB** platform with **Docker** and **Ansible** to automate **service requests**, configuration tasks, and **application health checks**.
- Automated testing, deployment, and routine support workflows using **GitLab CI/CD** to reduce manual operational tasks and improve deployment consistency.

EDUCATION

Master of Science (M.S.) in Computer Science | University of Maryland, Baltimore County (UMBC) | USA | GPA: 3.8/4.0

CERTIFICATION

- Microsoft Azure AI Engineer Associate | Microsoft
- Google Cloud Associate Cloud Engineer
- Data Visualization | Tata Group
- Cloud Computing | NPTEL
